

## Confirmed Posters:

Corresponding Author	Title	Theme	Poster Stand number
<b>Maximiliano Verocai</b>	Genetic architecture of phenological and yield-related traits in a barley population representative of elite breeding in South America	Morphology, phenology, and development	55
<b>Muhammad Awais</b>	GENETIC CONTROL OF AWN ROUGHNESS IN BARLEY	Morphology, phenology, and development	56
<b>Vėjūnė Pukenytė</b>	Investigation of the association between barley tweaky spike mutations and auxin biosynthesis pathways using comparative genome analysis	Morphology, phenology, and development	57
<b>Isaia Vardanega</b>	Identification and characterization of CLV receptors and CLE peptides regulating barley shoot meristem maintenance and development	Morphology, phenology, and development	58
<b>Volodymyr Radchuk</b>	Molecular mechanisms of assimilate transport in barley grains	Morphology, phenology, and development	59
<b>Marek Marzec</b>	New barley strigolactone mutants identified using TILLING strategy	Morphology, phenology, and development	60
<b>Raffaella Battaglia</b>	Sporophytic control of male fertility, the role of the HvSWEET4 gene	Morphology, phenology, and development	61
<b>Thirulogachandar Venkatasubbu</b>	Strategies of grain number determination differentiate barley row-types	Morphology, phenology, and development	62
<b>Gesa Helmsorig</b>	eam7 accelerates plant development in barley by altering the expression of core clock genes	Morphology, phenology, and development	63
<b>Francesco Cosenza</b>	Genetic mapping and allele discovery for flowering time and plant height using a double round-robin population of barley	Morphology, phenology, and development	64
<b>Roberta Rossi</b>	Progress towards QTL mapping and identification of mutants for culm-related traits in barley	Morphology, phenology, and development	65
<b>Venkatasubbu Thirulogachandar</b>	Meristem establishment and maintenance in barley	Morphology, phenology, and development	66
<b>Edgar Demesa-Arevalo</b>	Identifying meristem-type specific regulatory circuits in complex inflorescences of barley using transcriptomics at single-cell resolution	Morphology, phenology, and development	67
<b>Luigi Cattivelli</b>	The miRNA397a/laccase regulatory module control kernel size and shape in barley	Morphology, phenology, and development	68
<b>Luigi Cattivelli</b>	Investigating the role of GRF4 in Barley seed size determination	Morphology, phenology, and development	69
<b>Yongyu Huang</b>	A molecular framework for grain number determination in barley	Morphology, phenology, and development	70
<b>Roop Kamal</b>	Genetic association of spikelet abortion with spike, grain, and shoot traits in highly-diverse six-rowed barley ( <i>Hordeum vulgare</i> L.)	Morphology, phenology, and development	71
<b>Serena Rosignoli</b>	A chemically-induced new mutation affecting leaf width in barley	Morphology, phenology, and development	72
<b>Ilyse Putz</b>	Dissection of life history traits in annual and perennial wild relatives of barley	Morphology, phenology, and development	73
<b>Alvarez Prado S</b>	CRONOBARLEY 2.0: A simple model to predict phenology in malting barley based on cultivar thermo-photoperiodic response	Morphology, phenology, and development	74
<b>Li Guo</b>	Identification of gravity regulated genes that encode direct interaction partners of barley ENHANCED GRAVITROPISM 2	Morphology, phenology, and development	75
<b>Jorge Damian Parrado Marrades</b>	PPD-H1 ALLELES AND REPRODUCTIVE OUTPUT IN BARLEY	Morphology, phenology, and development	76
<b>Guojing Jiang</b>	Cell Non-autonomous Signaling by an ALOG (HvALOG1) Transcription Factor Specifies the Determinacy of the Barley Triple-Spikelet Meristem	Morphology, phenology, and development	77
<b>Laura Rossini</b>	Characterization of barley plant architecture mutants from the HorTILLUS population	Morphology, phenology, and development	78
<b>Alessandro Tondelli</b>	Cloning and functional characterization of the barley viridis zb63 photosynthetic mutant	Morphology, phenology, and development	79
<b>Mingjiu Li</b>	Genetic dissection of chloroplast biogenesis in barley	Morphology, phenology, and development	80

<b>Maëva BICARD</b>	Improve genetic gain through the understanding of genotype by environment interactions in spring barley breeding programs	Morphology, phenology, and development	81
<b>Ronja Wonneberger</b>	Identification of loci conferring tolerance to Manganese deficiency in Scottish Bere barley landraces	Baltic and Nordic barley: a regional perspective	82

Coffee&Snaks
